

TANZANIA HEAD OF ISLAMIC SCHOOLS COUNCIL
FORM SIX INTER ISLAMIC MOCK EXAMINATION

131/3A. PHYSICS 3A

ACTUAL PRACTICAL

PROPOSED MARKING GUIDE

1. (i) A table of results.
(6 marks: 1 mark @ Column)

$h(\text{cm})$	$h^2(\text{cm}^2)$	$t(\text{sec})$	$T(\text{sec})$	$T^2(\text{sec}^2)$	$T^2h(\text{sec}^2\text{cm})$
6	36	6.54	0.654	0.428	2.568
5	25	6.52	0.652	0.425	2.125
4	16	6.64	0.664	0.441	1.764
3	9	7.04	0.704	0.496	1.488
2	4	8.02	0.802	0.643	1.286
1	1	10.79	1.079	1.164	1.164

(ii) graph plotted on a graph paper.

(iii) Required to find the values of a and b .

Using the relation,

$$T^2h = \left(\frac{2\pi}{a}\right)^2 (b^2 + h^2)$$

$$h^2 = \left(\frac{a}{2\pi}\right)^2 T^2h - b^2$$

$$y = mx + c$$

$$\text{slope}(s) = \left(\frac{a}{2\pi}\right)^2 \quad \dots \quad \frac{0.1 \text{ mK}}{2}$$

$$\text{and } h^2\text{-intercept} = -b^2 \quad \dots \quad \frac{0.1 \text{ mK}}{2}$$

1 (iii)

From the graph,

$$\text{slope (S)} = \frac{\Delta h^2}{\Delta T^2 h}$$

$$= \frac{9.38 - 21.86}{1.5 - 2}$$

$$= 24.96 \text{ cm/s}^2 \quad \text{--- 0/mrk. / 2}$$

Then,

$$S = \left(\frac{a}{2\pi} \right)^2$$

$$S = \frac{a^2}{4\pi^2}$$

$$a^2 = 4\pi^2 \times S$$

$$a = \sqrt{4\pi^2 \times S}$$

$$a = 2\pi \sqrt{S}$$

$$= 2\pi \times \sqrt{24.96}$$

$$a = 31.375 \text{ cm}^{1/2}/\text{s} \quad \text{--- 0/mrk.}$$

Again from the graph.

$$h^2\text{-intercept} = -28.08 \text{ cm}^2$$

$$\text{Thus } -b^2 = -28.08 \text{ cm}^2$$

$$b = \sqrt{28.08 \text{ cm}^2}$$

1 (iii)

$$b = 5.3 \text{ cm}$$

(0/mrk)

(iv) Recall the given equation

$$T_h^2 = \left(\frac{2\pi}{a} \right)^2 (b^2 + k^2)$$

$$T = 2\pi \sqrt{\frac{k^2 + b^2}{g}}$$

Thus $T^2 h = \left(\frac{2\pi}{\sqrt{g}} \right)^2 (k^2 + b^2)$ (0/mrk)

By Comparison

$$a = \sqrt{g} \quad \text{and} \quad b^2 = k^2$$

$$a^2 = g \quad \text{and} \quad b = k$$

Therefore, a^2 represents acceleration due to gravity, g at a place. (0/mrk)

' b ' represents the radius of gyration k of a circular cardboard provided. (0/mrk)

(v) Sources of errors.

- Error due to air resistance on oscillation of Circular Cardboard.
- Error on starting and stopping stopwatch
- Error on locating the Centre of gravity using string or plumb line.

(Any two, 0.5 mark each)

1

(v)

Precautions to be taken.

- The Centre of gravity G should be perfectly located.
- A Circular Card board should oscillate through a small angle.
- The graph should have the best fit line drawn through the points.

(Any two, 0.5 mark each)

(vi) Two possible aims of this experiment are :-

→ Determine the value of acceleration due to gravity g by means of oscillation of Circular Card board.

→ Determination of radius of gyration K of a Circular Card board provided.

0.5 mark

0.5 mark

2 Solution.

(a) Mass of solid, $M = 100.5\text{g}$ --- (0.5mk)

Mass of Empty Calorimeter $M_c = 34.5\text{g}$ (0.5mk)

Room temperature $\theta_R = 30^\circ\text{C}$. (0.5mk)

(c) Table of results --- (2.5mk)

TIME(min)	Temperature, $\theta/^\circ\text{C}$
00	80
01	72
02	68
03	64
04	60
05	57
06	54
07	51
08	49
09	47
10	46

(d) Mass of Calorimeter with hot water = 75.5g (0.5mk)

Mass of water $M_w = 75.5\text{g} - 34.5\text{g}$.

$$M_w = 41\text{g}$$

h^2 (cm²)

A GRAPH OF h^2 (cm²) AGAINST T^2h (s²cm)

Scales:

Vs 1 cm represent 1 cm²
Hs 1 cm represent 0.25 s²cm

TT — 0 1/2
SC = 0 1/2
AX = 0 1
BL = 0 1/2
TP = 0 1/2
SI = 1/2

2 (e) Table of Results (2.5 marks)

Time (min)	Temperature $\theta(^{\circ}\text{C})$
00	80
01	69
02	66
03	63
04	60
05	58
06	56
07	54
08	53
09	52
10	51

e (i) Cooling curves plotted on a graph paper.

(ii) From the graph.

$$T_2 = 55^{\circ}\text{C}$$

$$T_1 = 49^{\circ}\text{C}$$

$$\Delta T = T_2 - T_1$$

$$\Delta T = (55 - 49)^{\circ}\text{C}$$

$$\Delta T = 6^{\circ}\text{C}$$

(O/mrlc)

e

(ii)

From the given equation.

$$M_c C_c \Delta T + M_w C_w \Delta T = M C \Delta T'$$

$$\text{Where } \Delta T' = T_2 - \theta_R.$$

Now,

$$C = \frac{(M_c C_c + M_w C_w) \Delta T}{M (T_2 - \theta_R)}.$$

$$C = \frac{(34.5 \times 0.4 + 4 \times 4.2) \times 6}{100.5 (55^\circ\text{C} - 30^\circ\text{C})} \quad \text{--- (0/mrk)}$$

$$C = 0.444 \text{ J/g}^\circ\text{C}.$$

$$C = 444 \text{ J/kg}^\circ\text{C} \quad \text{--- (0/mrk)}$$

$\therefore$ Specific heat Capacity = $444 \text{ J/kg}^\circ\text{C}$.

2 e (1) A GRAPH OF TEMPERATURE $\theta(^{\circ}\text{C})$ AGAINST TIME (min)

Scales:

V.C. 1cm represent 5°C .

H.S. 1cm represent 1min

$\theta(^{\circ}\text{C})$

3.

Solution

(i) Table of Results. (4 marks: 1 mark @ Column)

$R(\Omega)$	$L(\text{cm})$	$1/R (\Omega^{-1})$	$1/L (\text{cm}^{-1})$
40	79.8	0.025	0.0125
20	73.2	0.050	0.0137
10	62.7	0.100	0.0159
2	29.3	0.500	0.0341
1	17.6	1.000	0.0568

(ii) To draw a well labelled circuit diagram of the set up.

(02 marks)

3 (iii) According to Measurement,
diameter of the wire, $d = 0.37 \text{ mm}$.

(6.5 marks)

(iv) A graph plotted on a graph paper.

(v) From the given relation.

$$\frac{1}{R} = \left(\frac{A}{\rho}\right) \frac{1}{L} - \frac{1}{4}$$

$$y = mx + c$$

$$\text{Slope} = A/\rho$$

(0.1 marks)

From the graph.

$$\begin{aligned} \text{Slope} &= \frac{\Delta(1/R)}{\Delta(1/L)} \\ &= \frac{0.604 - 0.20}{0.04 - 0.022} \end{aligned}$$

$$\text{Slope} = 22.44 \text{ cm } \Omega^{-1}$$

(0.2 marks)

Now

$$\rho = \frac{A}{\text{Slope}}$$

$$= \frac{\pi d^2/4}{\text{Slope}}$$

$$= \frac{3.14 \times (0.37 \times 10^{-3})^2/4}{22.44}$$

$$\rho = 4.79 \times 10^{-7} \Omega \text{ m}$$

(0.1 marks)
